

# PriorityPak®

## Automated Ready-To-Ship Packaging

WATCH THE VIDEO

### PRODUCTIVITY

Reduces costs linked to labour by creating up to **15 ready-to-mail packages/min.** Once the product or the order has been scanned, the PriorityPak® produces an envelope to the right dimensions, prints and applies automatically the shipping label.

### PROTECTION

Products are protected with the PriorityWrap® Rigid Board and maintained in the center of the envelope to minimise shifting inside the package and avoid damages.

Several levels of protection are available.

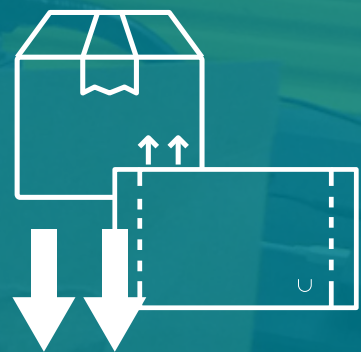

### SUSTAINABILITY

The PriorityWrap® Rigid Board is made of recyclable materials. This is an alternative to mailers made with plastics or mixed paper/bubble, requested by consumers.

### TRANSPORT

The system automatically provides a right-sized package which reduces the ratio weight/volume of the shipment. It enables significant savings on transport costs compared to carton boxes and thus to reduce CO<sub>2</sub> emissions.

### FLEXIBILITY

The PriorityPak® can pack single or multi-product orders. Easy open tear strips can be integrated into the envelope and it can be reused to return a product. This solution is perfect for a variety of applications such as books, photo albums, textile, accessories and little tools, spare parts, etc.
